

Emma Goulding - Bio

Childhood and Education

I have lived and worked in the West Midlands, UK most of my life. After completing my GCSEs I then studied my A-Levels at college before undertaking a Rolls-Royce technical apprenticeship. A few years later I then studied part-time at university before graduating with a degree in mechanical engineering.

Career History

I have nearly 12 years experience at SE first starting off as a technical apprentice. I've held roles in controls and performance engineering which have seen me get involved with software retrofit projects, undertake responsibility for test bed performance, alongside development of SGT-A65 power enhancement projects. I then made the move into my latest role as commercial manager.

Career Highlights

Transitioning from Rolls-Royce to Siemens, then Siemens Energy, has allowed me to travel to many places e.g., Germany, Angola, Montreal, Belgium etc. I have been involved with extremely varied projects, with the best and most successful ones delivered by inclusive teams!

Combining engineering and commercial work has allowed me to meet some fantastic people, many of whom I would consider lifelong friends and mentors.

Personal Life

I have trouble sitting still..! I love travelling to new places, alongside undertaking regular training for athletics. I love finding new walking routes with my canine companion, and I'm also a massive foodie.
